OBO BLACKLINE® ON TREND

Elegant, sophisticated, emotional: The colour black has been trending in architecture and interior design for several years. The light-absorbing non-colour shines in any setting and refines the ambience of a wide variety of interiors, be it in residential or commercial construction. At the same time, surface-mounted installations are experiencing a revival in the wake of industrial style interiors.

Contemporary concept

Surface mounted installations are not only versatile and adaptable, they also require no masonry work. This reduces both time and effort as well as costs and once installed, they are easy to maintain and expand upon. Another advantage is that surface mounted installations are particularly sustainable as they correspond to the concept of circular construction. This means that previously installed products are not simply disposed of when a building is converted, but reused and recycled. Surface mounted installations are especially suitable as they can be replaced and updated easily. With OBO BlackLine, we are presenting you a unique range that meets both trends: for a black surface mount and sustainable installation.

CONSISTENCY IN COLOUR

As the first and only system supplier, we offer you OBO BlackLine, a comprehensive range of premium solutions for black surface mounted installations. The portfolio includes, amongst other elements, cable trays, cable trunking, connection and fastening systems. Whether a retro or industrial style is required, products from the OBO BlackLine range enable a consistent design statement that blends seamlessly into contemporary architecture.

Sustainable planning, for installations in the colour black

With OBO BlackLine, sophisticated electrical installations can be realised. This applies to both new builds and to the renovation of existing buildings. These premium solutions can be used to stylishly remodel old warehouses or industrial units. The comprehensive product portfolio allows for many different components to work seamlessly together enabling a stylish and efficient delivery. OBO BlackLine not only offers multiple options in defining a distinctive and exacting style but also impresses in terms of sustainability and environmental compatibility. All products in the OBO BlackLine range are flexible, durable and characterised by high-quality materials and finishes. This means that they are predestined to be dismantled and reinstalled for subsequent use, in the future. Reusable products such as those in the OBO BlackLine range contribute significantly to more sustainability in the construction industry.

Versatility in application

Our premium solution for black surface mounted installations are perfectly suited for different types of buildings such as offices, event venues, shopping centres and retail outlets, restaurants and bars, hotels as well as exhibition spaces and educational institutions. Wherever functionality and design go hand in hand, we offer the ideal solution in the colour black.

Comprehensive support and assistance are available from the concept to completion of your project, from offering you initial information, to help during the planning stage and remaining available for aftersales support.

Cable containment systems

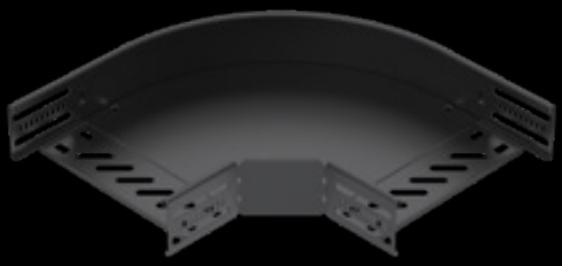
OBO BlackLine cable containment systems can be installed completely in the colour black. You can choose between classic wall supports and a variety of ceiling suspensions. This means that not only cables can be routed in interior spaces in a design orientated way, but they also allow for the harmonious integration of lighting systems.

archiproducts® AWARDS WINNER

RKS-Magic® 60 from the OBO BlackLine range has been awarded the Archiproducts® Design Award in the category “Construction”.

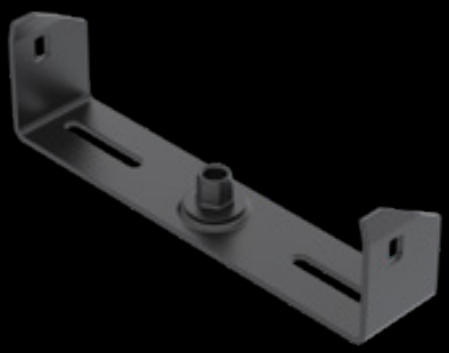
Cable tray RKS-Magic®

Cable tray MKS-Magic® unperforated



RB 90° bend

Wall and support bracket AW 15



Centre suspension MAH 60

US 3K suspended support

Lighting solutions: APL and Architectural FX

Our cooperation partner APL / Architectural FX have developed a modular lighting system that provides high-quality lighting for architecture that is easy to install, sustainable and affordable. With the APL system, professional lighting can be integrated individually as a plug & play system solution into OBO's cable support systems.

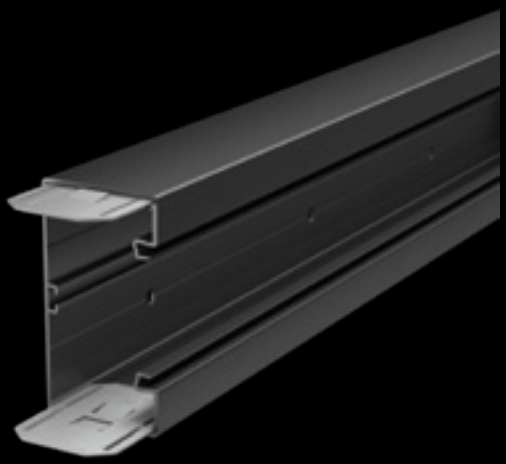
You can find the APL lights here

Cable containment systems

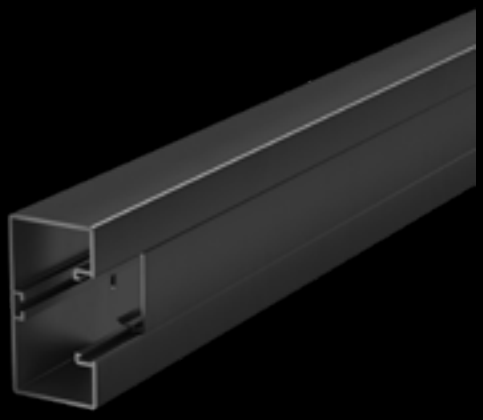
These premium solutions ensure perfect harmony when using the sophisticated black style in interior spaces. They not only route cables in a design orientated way through a room but also carry power and data to the appropriate place. Various options of black power poles can ensure an elegant and flexible power supply to the centre of any room.

Power pole, type ISSRHSM

Wall and ceiling trunking WDK

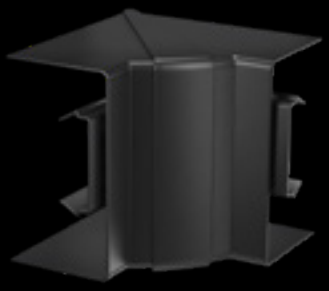


Device installation trunking Rapid 80



Device installation trunking Rapid 45

Accessory mounting box 71GD

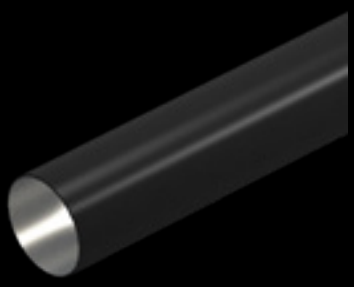


Internal bend GK-IH

External bend GK-AH

Connection and fastening systems

To feature surface mounted installations to their best advantage you need system solutions that match the industrial style. With the OBO BlackLine range, you can make a design statement in aesthetically demanding interiors and also set new standards in functionality and sustainability.



Black steel conduit, steel S series

Quick clip 2955

Junction box, T series

To realise modern electrical installations and sophisticated design concepts in contemporary architecture, we offer compatible underfloor trunking systems.

Telekom flagship store, Hamburg

The Telekom flagship store in Hamburg combines architecture, brand environment and sustainability under one roof. A shell of black ceilings and walls frames the room and allows the magenta colour brand of Telekom to shine.

The OBO cable trays from the BlackLine range fit seamlessly into the design and provide safe routing of cables under the ceiling. The black, premium solution for surface-mounted installations from OBO creates a fitting symbiosis of design and functionality in the style-oriented environment of the flagship store.

BVB FanWelt (fan zone), Dortmund

The BVB FanWelt building impressively demonstrates the flexibility and elegance of OBO BlackLine. On more than 2,000 square metres, all the club's services and shops, from ticket sales to merchandising, are united under one roof. The architecture is open, inviting and spacious, with the interior design reflecting Dortmund's industrial heritage. The OBO BlackLine products fit into the industrial style of the interior seamlessly and reflect upon one of the club's colours.

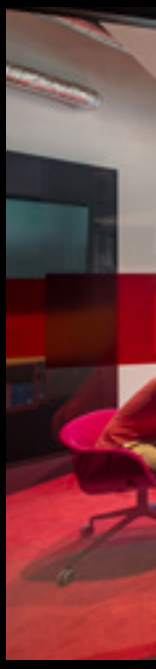
Eclipse, Düsseldorf



The Eclipse office tower on Düsseldorf's Kennedydamm heralds a new era of working. The building, designed by HPP Architects Düsseldorf and UNStudio, Amsterdam, focuses on sustainable and flexible architecture that meets the requirements of the future.

The OBO BlackLine products match the clean lines as well as the open and communication friendly zones of the buildings and fit perfectly into the industrial look of the Eclipse. The DGNB Platinum certification confirms that the building meets the highest sustainability standards. In addition, digital control systems and modern lighting concepts enhances its functionality.
